

FreeFlow Bedding Dispenser

Workstations

The Allentown FreeFlow Bedding Dispenser combines a wealth of input from end-users with a unique approach to design, resulting in a groundbreaking solution that's both highly effective and easy to use - freeing end users from the headaches associated with cumbersome installations, difficult transportation, and the need for compressed air for operation.

Electrically Driven Valves Eliminate the Need for Compressed Air. Completely Plug and Play!

Small enough to fit through doors, easy to move and set into place. Plug in, add bedding, and begin...it's that easy. The FreeFlow needs no compressed air or other support mechanical functions like most other dispensers on the market today. No need to install bulky and expensive compressed air connections, no special electrical requirements...just plug and play. As easy to set up and install as it is easy to use, the Allentown FreeFlow bedding dispenser makes bedding dispensing a breeze.

Mechanically & Vacuum-Operated Conveyance.

Some bedding dispensers use vacuum to move bedding, others use mechanical means... on their own neither are extremely efficient at consistently and reliably moving bedding...leading to jams and down time. Why not use both methods? The designers of the FreeFlow combined the best of both worlds, integrating mechanical and vacuum technology into one efficient system. Less jams...less downtime...more efficiency for you and your facility.

10 Cage Sizes, 10 Bedding Amounts... Perfect Every Time.

The FreeFlow allows for 10 custom pre-set bedding dispensing levels, so you're just a couple of touch-screen touches away from the perfect amount of bedding...no matter what size cage you have in your hand. The programmability of the FreeFlow allows for increased consistency in bedding amounts throughout all cages in your facility...leading to less waste, cost reductions and the proper foundation for a safe microenvironment for your animals and your research.

Complete Control. Right at Your Fingertips.

At the heart of the FreeFlow's ease of use is its innovative touch screen interface. Allowing access to a wide variety of menus, the touch screen interface puts a wide variety of efficient features at users' fingertips. Moving bedding, operating the built-in vacuum for small clean-ups, checking bedding levels, accessing dispensing and use statistics...all of these features and more are just a touch away.

FreeFlow Bedding Dispenser

Workstations

Features & Benefits

- No need for compressed air, valves are electrically driven
- Easy to use touch screen for simple operation and accuracy
- Maximum efficiency resulting from dual mechanical and vacuum bedding moving system
- Easy to load hopper handles ALL FREE-FLOWING BEDDING
- Two side-by-side, ultrasonic dispensers automatically detect cages and dispense bedding according to 10 editable and pre-programmed settings
- Dual Micro-Pleated filters provide superior dust capture during dispensing
- High energy efficiency with automatic sleep mode during periods of non-use
- Easy to move and install with adjustable castors; fits easily through typical doorways and elevators
- Truly Plug and Play!
- Integrated vacuum for easy clean-up
- Variable color work-area lights
- Removable plexi-glass panels for in-line use
- Automatic or programmable auto stop when filling top hopper
- Work surface doubles as support shelf when filling unit with bedding
- Safety circuit will cut off operation when work surface is removed
