

Phantom Bedding Disposal Station

Workstations

The Phantom Bedding Disposal Station advances the Phantom line of solutions by taking all that was learned in the development of the Phantom Animal Transfer Station and incorporating it into a truly unique and effective bedding disposal station. Energy efficient, quiet, with less vibration and care taken toward ecologic responsibility, the Phantom BDS offers all of this while still providing a larger work surface, greater illumination, and many other worthwhile features and benefits

Bring More to Your Research with Less Noise, Less Vibration, Less Heat and 62% Less Energy!

Like the Phantom Animal Transfer Station, the Phantom Bedding Disposal Station is powered by a single ECM motor. Quiet, and with minimal vibration, ECM motor technology is just one of many built in features that make the Phantom Bedding Disposal Station the most energy efficient units on the market today.

CPRS - An Industry First. Only from Allentown!

The Phantom BDS Container Particulate Reclamation System (CPRS) - prevents any debris or allergens from exiting the waste receptacle during the cage dumping process. Unlike other disposal stations on the market today, the CPRS helps prevent allergens and debris from reentering the room...resulting in a safer working environment for you and your staff.

The Most Ergonomic Bedding Disposal Station on the Market!

The Phantom BDS has a larger work surface to accommodate larger-sized housing, a sloped surface for ease of bedding capture and twice the illumination than the previous model. These features together with a new integrated bang-bar, a bag-caddy removal cart and an industry first under-unit capture system make the Phantom BDS the most ergonomic system on the market today.

Phantom Bedding Disposal Station

Workstations

Features & Benefits

- Highly Efficient, Single ECM Motor Technology (patent applied for)
- Uses 62% Less Energy
- Significantly Quieter Operation with Less Noticeable Pitch
- Work Area is 14% Larger to Accommodate Larger Caging
- Work Area is Twice as Bright as Current Models
- Work Surface is Angled for Ease of Use
- Full Width Bang Bar Provides Quicker Dumping without Cage Damage
- 3X Larger Pre-Filters Require Changing Far Less Frequently
- Pre-Filters are Much Easier to Change
- HEPA Filter has Twice the Capacity of Current Models and Requires Changing Far Less Frequently
- Container Particulate Reclamation System (CPRS) Prevents Debris and Allergens from Exiting Waste Receptacle
- Constructed from Non Petroleum-Based, Recyclable Materials
- Optional Bag-Caddy Removal Cart
